PERSONAL DETAILS

Date of Birth:	2058-10-01 (15th Jan, 2001)
Sex:	Female Nepali
Nationality:	
Github:	https://github.com/noknowledg
Linkedin:	https://www.linkedin.com/in/anuradha-shukla-26997330a/

EDUCATION

- **YashaswiGurukulEnglish School, Dhobighat, Laitpur (2020)**
  - SEE NEB passed with 3.95 GPA
- **Himalyan Whitehouse International School, Tinkune, Kathmandu (2020-2022)**
  - Class 11 and 12 (SLC) NEB passed with 3.32 GPA
- **International School of Management and Technology , Yogikuti, Butwal**
  - Bsc.IT -waiting for the result

SKILLS

- Programming languages (Node js, React , Mysql, Python)
- Tools and platform (Vs, postman, git, google colab roboflow)
- Teamwork
- Time Management
- Effective Communication

EXPERINCE

Intern for 3 months : "Gems Tech, Devdaha" on proejct related to 'Early disease detection of chicken

Machine learning engineer (3 months) : Synthbit Technologies, Butwal

ACHIEVEMENT AND PARTICIPATION

Participated in Hackathon, ICT Competition, Code Feast.

PROJECTS

AI/ML projects

Smart waste detection model

Tools: Tools: Python, Google Colab, Roboflow, OpenCV

- Developed a CNN model from scratch using Python for waste classification.
- Classified waste into Biodegradable, Non-Biodegradable, and Hazardous categories.
- Trained the model in Google Colab with GPU support.
- Integrated OpenCV for real-time image-based waste detection.

Character recognition using ocr

Tools: Tools: Python, Google Colab, Roboflow, OpenCV

- Implemented OCR logic to extract text from images and integrate it into a complete system.
- Used Python, OpenCV, and Tesseract OCR for text detection and recognition.
- Applied image preprocessing techniques to enhance recognition accuracy.
- Integrated extracted text into the system workflow for automated processing and data handling.

Student Monitoring System (Customized Model)

Tools: Tools: Python, YOLOv8, Ultralytics, Google Colab, Roboflow, OpenCV

- Developed a customized deep learning model using YOLOv8 (Ultralytics) for automated student attention monitoring.
- system analyzes uploaded classroom videos and provides the percentage of attentive and non-attentive students.
- Utilized Roboflow for dataset creation and annotation, and trained the model in Google Colab with GPU support.

Chicken detection model (customized model

Tools: Tools: Python, YOLOv8, Ultralytics, Google Colab, Roboflow, OpenCV

- Developed a deep learning model using YOLOv8 (Ultralytics) for real-time chicken detection and classification.
- Utilized Roboflow for dataset collection, annotation, and preprocessing, and trained the model in Google Colab with GPU acceleration.

Credit scoring system with GUI interface

Tools: Python,Tkinter,Pandas, Scikit-learn, Logistic Regression

Developed a machine learining modle using logistic regression to predict personal credit scores based on real-world dataset.

- Designed and developed a fully functional GUI using Tkinter.
- Implemetned feature engineering and data preprocessing to improve model accuracy**.**

Email spam detection model

Tools:Python, Pandas,Scikit-learn (KNN, SVM, Naive Bayes ,Logistic regression)

- Built and evaluated multiple ML classifiers to detect spam emails.
- Preprocessed data, trained models and used confusion matrix to compare performance.

WEB APPLICATIONS

Job Portal Development

- Built a full-stack job portal using Node.js (backend) and ejs (frontend).
- Implemented secure user authentication using JWT and MySQL database.
- Designed and developed company and candidate dashboards with dynamic job listings.

AI Solution (Portfolio website)

- Built a full stack dynamic portfolio website using Node.js (backend), React js (frontend) and MySql as database.
- Implemented secure user authentication using JWT and MySQL database.
- Designed and developed fully dynamic website with proper secure admin dashboard with CRUD operation.
  Highlighted maximum detail of the company and proper inquiry to the services along with the email reply by admin.

Mobile application for gym trainer (FITLIFE)

- Developed a Gym Trainer Android application using Java, XML, and Android Studio.
- Implemented full CRUD operations for managing workouts, exercise and equipments.
- Designed responsive UI layouts and ensured smooth navigation and proper app functionality.
- Structured backend logic for efficient data handling and user interaction
